👤 PROFILE

Software Engineer (C#/.NET) experienced in building internal tools, services, automation pipelines and games. 3+ years across software development, games and QA, with an interest in creative software and visual design.

🧠 SKILLS

Programming Languages & Frameworks: C#, .NET, SQL, JavaScript, Blazor, HTML, CSS

Technical Tools: Azure DevOps, Kubernetes, Docker, CI/CD, Git, Postman, Grafana, Kibana, Jira, TestRail

Game & Creative Software: Unity, Unreal Engine, Blender, Blueprint, React Three Fiber, Three.js

📁 PROFESSIONAL EXPERIENCE

Software Engineer in Test, Smartodds Limited, London Jul 2025 – Sep 2026

- Built internal C#/.NET tools, including WinForms apps and background services, and contributed to a Blazor dashboard used by support, dev and QA teams
- Set up monitoring and alerting through Teams and email, with visibility into Grafana dashboards and Kibana logs to catch data issues early
- Migrated 15 QA platform services from .NET 8 to .NET 10 and created a reusable build template
- Automated tests in Azure DevOps pipelines for containerised (Docker/Kubernetes) microservices, covering REST APIs, MassTransit messaging and real-time WebSocket data
- Wrote PostgreSQL and MySQL queries across multiple databases for data validation and analysis

QA Tester, West Pier Studio, Brighton Apr 2024 – Jun 2025

- Tested Web, WebGL, iOS and AR apps with Unity and web developers, writing test plans in TestRail
- Built and maintained a C# test automation library (NUnit, Selenium) for cross-browser login flows
- Wrote 200+ unit tests for core libraries and ran API (Postman) and MySQL tests for data integrity

Service Administrator, IPG Photonics, Coventry Sep 2023 – Mar 2024

- Coordinated service requests, quotes, stock and engineer site visits, liaising with customers and partners

QA Technician, Codemasters, Southam Apr 2019 – Aug 2020

- QA on F1 Mobile Racing (live-service iOS & Android), shipping updates and store releases in Agile sprints
- Tested gameplay, UI/UX, monetisation; logged and prioritised bugs in Jira with Confluence documentation
- Used GameSparks to monitor backend activity, add in-game assets, pull logs and report currency exploits

📁 PROJECTS

Portfolio, 3D Website

Interactive 3D portfolio site with mobile support, built with React Three Fiber and Blender

Tankeo Drift, Roguelike Game

Unity C# roguelike with enemy waves, tank upgrades and an endless procedural level, playable in browser

Procedural Terrain Shader

Three.js GLSL shader generating island terrain (water, sand, grass, rock, snow) from noise functions

🎓 EDUCATION

BSc (Hons) Computer Games Design and Programming, First Class Honours (82%) Sep 2020 – Jun 2023
Staffordshire University

Individual Games Technology Project (87%): Developed a 3D dungeon crawler game in Unreal Engine 5 with procedural levels, scalable AI, unique floor bosses and a tier-based upgrade system

A Levels & GCSEs, Princethorpe College, Rugby Sep 2011 – Jun 2018

A Levels (ICT, Geography, English) & 10 GCSEs A–C, including Maths and English
